■ Current Setting

LED Current Tolerance over temperature and component variations is $500\text{mA} \pm 6\%$ / $700\text{mA} \pm 4\%$ at any level.

The output current of the driver can be adjusted using the two dip switches provided on the top of the driver. The below pictures shows the switch positions required to set the current to different levels.

The driver will be shipped out of factory with both switches set to ON (700mA).
